

Data Science Course: Capstone Project 1

Capstone Project: Project Proposal

Learning Objective

- Narrow down from the list of three project ideas to one executable project.
- Write a proposal that identifies a real-world problem and an approach to solve it.

| Criteria | Meets Expectations |
|---------------------------|---|
| Completion | ☐ 1-2 page google document (commentable by mentor) |
| Process and understanding | The submission demonstrates that the student has articulated a problem statement that is within scope of this course. The submission demonstrates that the student has selected a problem with a dataset that is relatively clean, easy to use, and |
| | within scope. The submission demonstrates the student is able to justify a significant problem to solve for a realistic client (even if the client is imaginary or hypothetical). The submission includes a strong justification of how the client can utilize the outcomes of the project. |
| Presentation | ☐ The proposal is clear and follows in logical flow in stating the problem to be addressed and the data to be utilized. |

Excellence: The above criteria was met and the submission includes a real data set/client or will focus on a novel problem, perhaps leveraging the students domain expertise. The student posts their submission to the student community for feedback.

For reference, review how this interim project fits into the Overall Capstone Project 1 Rubric.
